Computer Science undergraduate focused on engineering highly scalable internal business applications, RESTful web services, and automated data pipelines using Java, Python, and Google Cloud.

EDUCATION

VNR Vignana Jyothi Institute of Engineering and Technology

Bachelor of Technology in Computer Science and Engineering; CGPA: 9.1

Hyderabad, India

Expected May 2028

EXPERIENCE

Software Developer Intern

MyClassBoard

Jul 2026 – Present

Hyderabad, India

- Developed asynchronous RESTful backend services in **Python** and **FastAPI** for AgentP, automating manual business workflows by matching student ID references against event photos in **Google Cloud Storage**
- Engineered a computer vision algorithm pipeline with **ONNX Runtime** and OpenCV, applying 5-point facial landmark alignment and 512-dimensional embeddings, driving the false-positive match rate to 0%
- Optimized backend throughput and operational scaling via **PostgreSQL** connection pooling and deterministic caching, and authored 500+ Pytest unit/integration tests to ensure strict data isolation

Software Engineer Intern

FORTE

Jul 2025 – Nov 2025

Hyderabad, India

- Architected ForteHR, an internal full-stack AI-powered HR analytics platform (React, TypeScript, Supabase) with **RBAC**, enabling secure and automated operational workflows for HR stakeholders
- Integrated the **OpenAI API** to power a custom AI assistant, translating complex HR data requirements into technical solutions and eliminating manual report generation bottlenecks

PROJECTS

Campus Project Tracker | *Java, Spring Boot, PostgreSQL* | [Live Demo](#) | [GitHub](#)

May 2026 – Present

- Architected a highly normalized **PostgreSQL** schema with composite indexes, eliminating N+1 query bottlenecks by replacing in-memory loops with optimized single-query **Spring/JPQL** aggregations
- Developed stateless **JWT** authentication APIs using **Spring Security**, successfully mitigating brute-force attacks via an in-memory rate limiter and secure custom filter chains
- Maintained strict development practices by containerizing the system with **Docker** and deploying a **GitHub Actions** CI/CD pipeline running **Maven/JUnit** backend tests on every commit

Post-Op Guardian | *React, Node.js, Express, REST APIs, PostgreSQL*

Feb 2026

- Engineered a full-stack recovery monitoring application to automate post-surgery patient check-ins, securing 1st place overall at the university Webathon
- Developed scalable **REST APIs** to process and validate critical patient recovery metrics, ensuring reliable data retrieval and system interoperability for medical staff

PhishGuard | *React, Node.js, PostgreSQL, ML Algorithms* | [GitHub](#)

Jan 2026 – Mar 2026

- Automated real-time phishing threat detection across URLs and file downloads by deploying a custom browser security extension (TypeScript, Chrome Manifest V3)
- Built a hybrid ML algorithm pipeline utilizing **Scikit-learn** trained on 50,000+ malicious records, integrated with **Google Gemini AI** to translate complex threats into human-readable explanations

ACHIEVEMENTS

Webathon Winner (Feb 2026): 1st place for architecting Post-Op Guardian, automating medical workflows

Designathon, 2nd Runner-Up (Mar 2026): Engineered PhishGuard, a real-time ML threat detection system

Research Publication, ICACECS 2025 (Aug 2025): Co-authored paper on algorithmic water quality assessment utilizing EF-BER, clustering, and KNN algorithms | [View on ResearchGate](#)

TECHNICAL SKILLS

Languages: Java, Python, C++, C, JavaScript, TypeScript, SQL, HTML/CSS

Backend & Web Services: Spring Boot, FastAPI, Node.js, Express.js, RESTful APIs, SOAP, Asyncio

Systems & Algorithms: Data Structures, Object-Oriented Design, Relational Database Optimization

Databases: PostgreSQL, Oracle SQL, MySQL, MongoDB, Redis

Cloud & DevOps: Google Cloud Platform (GCS, Vision API), Supabase, Docker, GitHub Actions, CI/CD

Frontend: React.js, Next.js, Tailwind CSS, Bootstrap

Tools & Testing: Git, GitHub, Maven, JUnit, Pytest, Figma, StarUML
