EDUCATION

VNR Vignana Jyothi Institute of Engineering and Technology

Bachelor of Technology in Computer Science and Engineering; CGPA: 9.1

Hyderabad, India

Expected May 2028

EXPERIENCE

Software Developer Intern

Jul 2026 – Present

MyClassBoard

Hyderabad, India

- Developed asynchronous RESTful backend services in **Python** and **FastAPI** for AgentP, streamlining manual business workflows by matching student ID references against event photos in **Google Cloud Storage**
- Engineered a computer vision algorithm pipeline with **ONNX Runtime** and OpenCV, applying 5-point facial landmark alignment and 512-dimensional embeddings, driving the false-positive match rate to 0%
- Optimized backend throughput and operational scaling via **PostgreSQL** connection pooling and deterministic caching, and authored 500+ Pytest unit/integration tests to ensure strict data isolation

Software Engineer Intern

Jul 2025 – Nov 2025

FORTE

Hyderabad, India

- Architected ForteHR, an internal full-stack AI-powered HR analytics platform (React, TypeScript, Supabase) with **RBAC**, enabling secure and modernized operational workflows for HR stakeholders
- Designed an asynchronous LLM processing pipeline using the **OpenAI API** and custom system prompting, implementing semantic caching to reduce token usage and API overhead for complex HR data requirements

PROJECTS

Campus Project & Internship Tracker | *Java 21, Spring Boot, PostgreSQL, React* | [Live Demo](#) | [GitHub](#) May 2026 – Present

- Scaled backend concurrency using Java 21 Virtual Threads (Project Loom) and fine-tuned HikariCP connection pooling, sustaining 785+ Requests/Sec (47,000+ req/min) across 200 concurrent users with 0.00% error rate (p50: 65ms, p99: 211ms)
- Reduced frequently queried internship listing latency from ~531ms to ~4.7ms (99.1% drop) by integrating Caffeine in-memory caching (@Cacheable) with automated cache invalidation on write events
- Eliminated N+1 query bottlenecks and reduced JVM heap footprint by replacing Hibernate entity iteration with optimized **JPQL Fetch Joins**, DTO projections, and database-level scalar counts
- Implemented stateless JWT authentication with Spring Security, custom OncePerRequestFilter chain, and an in-memory sliding-window IP rate limiter defending against credential stuffing
- Enforced strict relational integrity (3NF) and database migrations with Flyway (ddl-auto=validate), composite B-tree indexing on status/company_id, and automated CI/CD with GitHub Actions

Post-Op Guardian | *React, Node.js, Express, REST APIs, PostgreSQL* | [GitHub](#)

Feb 2026

- Engineered a full-stack recovery monitoring application to automate post-surgery patient check-ins, securing 1st place overall at the university Webathon
- Developed scalable **REST APIs** to process and validate critical patient recovery metrics, ensuring reliable data retrieval and system interoperability for medical staff

PhishGuard | *React, Node.js, PostgreSQL, ML Algorithms* | [GitHub](#)

Jan 2026 – Mar 2026

- Orchestrated real-time phishing threat detection across URLs and file downloads by deploying a custom browser security extension (TypeScript, Chrome Manifest V3)
- Architected a hybrid detection engine pairing an offline **Scikit-learn** model trained on 50,000+ records (94%+ accuracy) with **Google Gemini AI** fallback routines, optimizing Chrome Extension background scripts for zero-latency URL intercepting

ACHIEVEMENTS

Webathon Winner (Feb 2026): 1st place for architecting Post-Op Guardian, transforming medical workflows | [Post](#)

Designathon, 2nd Runner-Up (Mar 2026): Engineered PhishGuard, a real-time ML threat detection system | [Post](#)

Research Publication, ICACECS 2025 (Aug 2025): Co-authored paper on algorithmic water quality assessment utilizing EF-BER, clustering, and KNN algorithms | [View on ResearchGate](#)

TECHNICAL SKILLS

Languages: Java 21, Python, C++, C, JavaScript, TypeScript, SQL, HTML/CSS

Backend & Web Services: Spring Boot 3.5, Virtual Threads (Loom), FastAPI, Node.js, Express.js, RESTful APIs

Systems & Algorithms: Data Structures, Object-Oriented Design, Relational Database Optimization

Databases: PostgreSQL 17, Oracle SQL, MySQL, MongoDB, Redis, Flyway, HikariCP

Cloud & DevOps: Google Cloud Platform (GCS, Vision API), Supabase, Docker, GitHub Actions, CI/CD

Frontend: React.js 19, Next.js, Tailwind CSS, Bootstrap

Tools & Testing: Git, GitHub, Maven, JUnit, Pytest, Caffeine
